Safety, Accessibility and Sustainability Panel

Date: 10 March 2016

Item: Integrated Assurance Plan 2016/17

This paper will be considered in public

1 Summary

1.1 The purpose of this paper is to present the 2016/17 Integrated Assurance Plan to the Safety, Accessibility and Sustainability Panel.

2 Recommendation

2.1 The Committee is asked to note the Plan.

3 Background

- 3.1 TfL has developed an Integrated Assurance Framework, describing the overall regime within TfL for the efficient provision of assurance over all of its activities.
- 3.2 The Framework recognises four principal functions involved in the delivery of assurance within TfL. These are Internal Audit, Project Assurance, HSE and Risk. The Risk function is not involved in carrying out assurance reviews, but ensures that there is a sound basis for the assurance activities carried out by the other functions.
- 3.3 The attached Integrated Assurance Plan sets out, in summary form, the planned assurance work to be carried out in 2016/17 by these assurance functions. Each of the functions has its own detailed programme of work that underpins the plan.

4 Development of the Plan

- 4.1 The Integrated Assurance Plan was developed from the strategic risk registers for Rail and Underground, Surface Transport and Specialist Services, and the consolidated pan-TfL strategic risk register.
- 4.2 Workshops were held for Rail and Underground, Surface Transport and Specialist Services involving directors and senior managers and representatives from assurance functions. The workshops were used to highlight areas where assurance work would be beneficial and to map the assurance requirements against TfL's strategic risks.
- 4.3 The workshops have been complemented by a number of lower level workshops and a series of one to one planning meetings with a range of directors and senior managers across the business.
- 4.4 A similar process has been followed in Crossrail to develop a plan for 2016/17. Historically, Crossrail has had its own audit team, albeit managed by the TfL

Internal Audit Senior Audit Manager – Crossrail, carrying out audits of compliance with the Crossrail management system. However, on 1 March 2016 this team transferred to TfL. This means that all Crossrail audit activity is now carried out by TfL Internal Audit, other than some safety and environmental auditors who remain 'embedded' in Crossrail, but whose work is directed by the SAM – Crossrail. The Crossrail audit plan, which is incorporated into this Integrated Assurance Plan, was scheduled to be approved by its Audit Committee on 7 March 2016.

- 4.5 The planning of the Integrated Assurance Reviews (IARs) led by the Programme Assurance team, together with the related work of the Independent Investment Programme Advisory Panel (IIPAG), has followed a different approach since this work is driven by the timing of the key gate stages of the major projects that are subject to review.
- 4.6 The Plan also incorporates planned work at the London Transport Museum (LTM). The LTM Audit Committee is scheduled to approve the Museum's Audit Plan at its meeting on 15 March 2016.
- 4.7 A programme of audit work in respect of the TfL Pension Fund is also carried out and reported to the Pension Fund Audit Committee.
- 4.8 The Plan has been presented to the Rail and Underground Board, the Surface Transport Board, and the Leadership Team. It is scheduled to be approved by the Audit and Assurance Committee at its meeting on 8 March 2016.
- 4.9 We have also shared the Plan with the external auditors, Ernst & Young, and we will be confirming with them, in due course, any areas where they may wish to place reliance on our work.

5 Overview of Plan

- 5.1 The Integrated Assurance Plan includes the assurance work to be carried out by Internal Audit and Project Assurance, together with the work of a number of assurance teams embedded in areas of the business, including the Surface Transport HSE Team who carry out audits of suppliers and bus operators; London Overground (LO) HSE and Engineers, who audit LO key suppliers; the LU Access Team, who audit track protection suppliers; and asset engineers who audit key suppliers against maintenance quality standards. These functions have worked together to ensure that assurance work is undertaken by the team most suited to deliver it, avoiding overlap and duplication.
- 5.2 Each of the assurance functions has its own processes and procedures for the delivery of its work, in line with relevant statutory requirements and professional standards, and aligned with the nature of the work it carries out. Nevertheless, where applicable the assurance teams will seek opportunities to better align their processes and methodologies so as to facilitate further joint working in the future. To assist with this, Internal Audit has established a 'Community of Auditors' bringing together staff from across TfL who carry out audits as part of their jobs. During 2016/17 Internal Audit will work with this group to further integrate the delivery of assurance by promoting a common set of standards for the conduct of audits across TfL.
- 5.3 The attached Plan is structured around TfL's seven top-level strategic risks. For each risk any planned assurance activity is grouped into themes.

- 5.4 The themes reflect the main elements of the risks, the mitigations and controls around those risks, and TfL's business objectives, activities and organisation. For each theme a number of audits and reviews have been identified through which it is expected to provide assurance over that theme.
- 5.5 The themes are likely to remain unchanged throughout the year. However, the specific audits and reviews against each theme are likely to change in response to evolving business priorities and plans. The thematic structure will provide a robust and stable basis on which to routinely report progress on assurance work completed and its outcomes.
- 5.6 The following paragraphs summarise the work planned against each of the strategic risks, and other key areas.

TfL01: Maintaining a Long Term Strategic Balanced Plan

- 5.7 The Commercial Development Directorate is taking forward a significant programme of work to grow TfL's income from secondary revenue streams, which is critical to delivery of TfL's business plan. In recognition of this we have recently appointed a dedicated Audit Manager Commercial Development, who will lead our audit effort in this area. The Commercial Development audit work will be a significant element of the plan and will review aspects of the general Commercial Development governance arrangements, as well as a number of individual work streams in more detail, including the sponsorship programme, advertising, and property developments. The latter will cover management of the overall programme of property developments, individual competitions for new JVs, and operation of the existing Earls Court JV.
- 5.8 We will carry out further audit work around TfL's efficiencies programme. The precise scope will be agreed with the business in order to ensure it supports and complements the work of PwC who have been engaged under a three year contract to provide assurance over the programme's deliverability.
- 5.9 We will also review elements of controls over ticketing revenue, including controls over completeness and accuracy, and over refunds, and concessionary travel arrangements.
- 5.10 In addition, where applicable we will include value for money considerations in each of our audits, with the aim of identifying areas of opportunity for the business to reduce spend, or deliver activities more efficiently.

TfL02: People Risk

- 5.11 Several of the audits against this risk focus on elements of personnel security. These include a review of TfL's security culture and an audit of employment based security screening. We will also review provision of Occupational Health services across TfL.
- 5.12 Other audits will cover recruitment of non-permanent labour (NPL) including use of personal service companies; grievance policy and associated procedures; movers and leavers processes; and staff induction.

TfL03: Delivery of Capital Investment Portfolio

5.13 Ensuring the effective and efficient management of projects and contracts forms

- a significant element of the assurance plan, and this is an area where all of the assurance teams have a role to play.
- 5.14 The Project Assurance team within Finance, will lead a comprehensive programme of around 120 Integrated Assurance Reviews (IARs), with input from the Independent Investment Programme Advisory Group (IIPAG), to provide assurance over project delivery. The IARs have historically been carried out by external consultancies, but over the past few years there has been increasing use of peer reviews. More recently the Project Assurance Team has been increasing its capacity and capability, so that increasingly IARs will be delivered in-house with external experts providing support rather than leading the reviews.
- 5.15 TfL is undergoing further developments in its methodology for and assurance of projects. We will carry out a suite of audit and consultancy assignments in consultation with the TfL Programme Management office to complement these, to help ensure that they are optimally effective. Furthermore, the organisation is seeking to improve the process for learning lessons from both successes and issues experienced with projects, and we have a key role to play in encouraging that, both by reviewing lessons-learned processes, and where appropriate by taking an active role in lessons-learned reviews.
- 5.16 TfL is also seeking to improve its commercial management arrangements. We will work closely with both of the main commercial functions to provide assistance to and assurance over these initiatives. For example, we plan to audit delivery of the Systems and People work streams of the Commercial Capability Programme, and to review aspects of project cost estimating. However, the precise plan of audits in this area will depend upon the outcomes of the Business and Finance Review, and the Commercial Review.
- 5.17 In both of these areas, we will consider the extent to which TfL's organisational culture impacts upon the effectiveness of risk management and control.
- 5.18 As in previous years, we will audit a number of important procurements, typically on a real time basis, and some non-project related contracts. In addition, we will carry out some more general work around TfL's procurement processes. This will include a review across a range of procurements to ensure there is proper maintenance of documentation in line with regulatory and TfL requirements; and a review of controls over the use of single sourcing.
- 5.19 We will also provide assurance by reviewing the safety and technical assurance regimes applicable to TfL projects and programmes, including capturing lessons learnt; documenting project work information; project requirements; and approval regimes for plant and track clearances. Specific audits will review design assurance for DLR, signal assurance within the '4 Lines Modernisation' programme, and projects that have additional power requirements.

TfL04: Technology Risk

5.20 Ensuring effective and efficient management of Technology and Information Security risks forms a significant element of the audit plan. In the last twelve months, organisational change has seen a greater alignment between the pan-TfL Technology and Data operations than in previous years. The plan seeks to reflect these operational changes with a renewed focus on Technology, Cyber Security and Data risks.

- 5.21 We will continue to work with the Chief Information Security Officer, Information Governance and other relevant stakeholders to provide assurance that the required processes, procedures and controls to manage the risks associated with data security have been implemented and are working effectively. There will be a significant programme of audits providing assurance that TfL data is being managed securely throughout the information lifecycle. These audits will cover both data held directly by TfL and by third parties on TfL's behalf and will cover controls to prevent data loss, as well as ensuring that effective response plans are in place should a data security incident arise.
- 5.22 Time has been allocated in the plan for reviews of major IM programmes of work including End User Computing mobile and Service Continuity under what was the 'Transforming IM' Programme.
- 5.23 We will also provide assurance in respect of other aspects of information security, including audits of SCADA and Connect systems, as well as continuing our work supporting the business in relation to Payment Card Industry Data Security Standards (PCI-DSS).

TfL05: Disruption to Quality of Service

- 5.24 We will be undertaking a number of cyclical audits across the business relating to basic IT network controls with a particular emphasis on providing assurance that risks to the underlying network infrastructure are effectively managed.
- 5.25 We will be undertaking a major review of the pan-TfL security incident management process looking at planning and management, and response and recovery as the two main themes.
- 5.26 In addition to work on information/ cyber security referred to above, we will also carry out a programme of audits covering physical security and threats due to the actions of individuals.
- 5.27 Our plan addresses assurance over the effectiveness of systems governing the maintenance of specific operational assets and the management of the associated risks. The audits include the maintenance of fleet, track, signals, power and operational infrastructure, focussing on risks to reliability and incidents that may cause suspension of services. Our plan is developed in collaboration with local asset assurance engineers.
- 5.28 Programmes of supplier audits will be carried out by both Internal Audit and the embedded auditors. These will be a mix of audits of procurement, contract management, and supplier conformance with management systems, with the aim of providing assurance that suppliers can be relied on to deliver goods and services of the required quality.
- 5.29 Specific audits will address the management of assets to mitigate obsolescence risk, the use of trend analysis to prevent repeat asset failure and a suite of audits to provide assurance of engineering quality during the overhaul of key operational assets.

TfL06: Targeting Continued Improvement

5.30 We have no audits planned specifically against this risk, although several of the audits included under other risks will also provide assurance over this one.

TfL 07: Major/ Catastrophic Incident

- 5.31 Our plan focuses on the effectiveness of management systems that contribute towards the control of safety risks to both TfL customers and employees as well as risks to the reliability of TfL services. Key themes of the programme are inspection and maintenance activities, particularly for track, signals, rolling stock, civils and lifts and escalators in LU; design control of new assets; and compliance with the management system. This is informed by intelligence on where weaknesses are present; effectiveness of recent changes to systems; and the adequacy of quality systems in key or poor performing suppliers.
- 5.32 The three-year rolling programme of compliance audits against HSE regulation and the TfL management system continues into its second year, following positive feedback from its introduction last year. Other audits will focus on themes including: Occupational Health, specifically display screen equipment; stress reduction; the new Construction (Design and Management) Regulations 2015; and changes to track access arrangements for maintenance and project teams. Topic specific audits will include environmental risk management, working at height and assurance work to support the HSE Transformation Programme.

Financial and Governance Controls

- 5.33 Following recent work on Standing Orders we plan to review the application of the delegated authorities contained therein. We will also provide assurance of the controls over the collection and publication of data under the local governance transparency code.
- 5.34 We will audit the revised strategic risk management processes to provide assurance that they are operating effectively.
- 5.35 We will also audit the governance structures in place within Rail and Underground and within Enforcement and On-Street (EoS) following recent changes in those areas.
- 5.36 As always, the assurance plan includes a number of audits of core financial processes, which this year will include the controls over fixed assets and Group Treasury. We will also review financial and business controls in relation to Congestion Charging, Road User Charging and Dial a Ride. We will review progress with the Build a Better Finance (BBF) project, focusing on the transition to business as usual to provide assurance that the project's objectives are being delivered.
- 5.37 Finally, we always ensure that our plan includes coverage of some staff related spend and governance areas (often referred to as 'hygiene' audits), which, whilst not necessarily of high monetary value, have potential for reputational damage if not properly controlled. In 2016/17, this will include reviews of gifts and hospitality and of 'Make a Difference Instant' awards.

5.38 The audits will be supplemented by a number of targeted data analytical reviews aimed at detecting potential instances of fraud in high risk areas.

Crossrail

- 5.39 The Crossrail Project is continuing to transition to station fit-out, systems works such as signals, and overseeing the delivery of rolling stock and depots. There is a related shift in the staff competencies required to deliver this phase of the Project, and the specialisms required of auditors to conduct the Audit Plan.
- 5.40 The audit plan for 2016/17 reflects the changing risk profile. We will continue to audit the management of project costs and schedule, but will have a stronger focus on technical aspects of the project over the coming twelve months.
- 5.41 The focus of the technical audits will be on the systemwide aspects of the Project, including signalling, communications and track work. There will also be a number of audits related to the phased transition to an operational railway, including testing and commissioning, engineering safety management and the Regulator approvals process.
- 5.42 As in previous years the plan will include a substantial programme of audits of controls over safety, environment, quality and occupational health at contractors, reflecting Crossrail's reliance on its supply chain for delivery of the project.

6 Medium Term Planning

- 6.1 As discussed above the Integrated Assurance Plan is risk based, and prepared annually by reference to the Strategic and Operational Risk Registers in order to ensure that assurance effort is properly directed. In line with professional guidance, the plan that we present only covers activity for one year ahead.
- 6.2 In some business areas, assurance provision is driven by the activity of the business. For example:
 - (a) Procurement audits The internal audit plan will always incorporate a programme of audits of major procurements, often carried out on a real-time basis. The decision about which procurements to review in any year is based on the risk associated with the procurements having regard to monetary value, complexity and reputational risk.
 - (b) Investment Programme Reviews The programme of IAR reviews carried out by the Project Assurance team is driven by the gate stages reached by each major project and programme.
 - (c) Other project related assurance There are also other areas of assurance that are driven by project related activities. This includes IM audit reviews of system developments; health, safety and technical audits linked to infrastructure projects, including audits of suppliers; and security audits of significant infrastructure developments.
- 6.3 There are, though, some areas where, despite the risk-based nature of our planning, there is a cyclical element to the work that we do. This particularly applies to assurance over routine business activities, that is not necessarily derived from the risk registers but where it is appropriate to ensure that

assurance is provided on a regular basis. These include the following:

- (a) Core Financial Controls We seek to ensure that we cover all significant financial control areas at least every three years. For the most significant areas, including Revenue, Procure to Pay and Payroll, a full audit of controls every three years will be supplemented by more targeted assurance work, so that there is always some assurance activity in these areas. For Procure to Pay and Payroll this will include annual performance of targeted SAP data interrogations of key controls aimed at proactive identification of any evidence of fraud or other irregularity.
- (b) Human Resources There are a number of core elements of HR control, which again we seek to ensure are covered over a three year cycle. These include HR activities such as recruitment, performance management, and learning and development.
- (c) Governance One key element of governance is risk management, which is intrinsic to the risk based planning of our work. We will, therefore, seek to carry out a regular programme of work on risk management processes. There are some other basic elements of corporate governance that we would seek to cover regularly on approximately a three year cycle.
- (d) Information Management While some assurance activity in relation to information management is linked to business activity, such as delivery of major IM developments, there are some basic IM control areas that we need to ensure are covered on a regular basis. This is particularly relevant to controls over the security and resilience of TfL's systems and data, where we seek to carry out some assurance work every year and ensure that all key areas are covered over a three year cycle.
- 6.4 Appendix 2 sets out, for these cyclical areas of the plan, the audits done in 2014/15 and 2015/16, the audits incorporated in this 2016/17 plan, and indicative audits for 2017/18.

7 Resources

- 7.1 Delivery of the Integrated Assurance Plan requires 12,760 person days across the assurance functions involved. This compares to 11,254 planned days in the 2015/16 plan. The primary reason for this change is the increased Project Assurance resource that will be available in 2016/17, as set out in paragraph 7.9. Further information on resources for each of the assurance functions is set out in the paragraphs 7.3 to 7.10.
- 7.2 An indication of how the time is allocated, by business area and risk, is shown in the following table. However, these allocations are likely to change over the course of the year, as plans are further refined, and in response to changes in business activity.

Summary of allocation of assurance resources by strategic risk and business area

Risk	Pan TfL	R&U	Surface Transport	Specialist Services	CRL	LTM	Pension Fund	Total Days	2015/16 Total Days
TfL01: Maintaining a long term strategic, balanced plan	0	0	25	485	0	0	0	510	443
TfL02: People risk	126	0	0	174	0	0	70	370	430

Total Days	4,799	3,288	762	1,834	1,857	150	70	12,760	
2015/16 Total Days	2,316	3,407	1,292	1,706	2,356	130	47	11,254	

Internal Audit

- 7.3 Internal Audit's total budgeted headcount for 2016/17 is 64, including the six staff transferred from Crossrail in March 2016. The team incorporates a wide range of skill sets including qualified auditors/ accountants, experienced project and contract managers, IM auditors, security specialists and fraud investigators. Full induction programmes and ongoing training are provided to enable everyone to comply with the Audit Manual and understand the purpose of the Internal Audit function. Audit staff who do not have an audit background are required to take the Certificate of Internal Audit qualification set by the IIA in their first year.
- 7.4 The Internal Audit service will be delivered wholly or largely using in-house permanent employees. TfL participates in a GLA-wide contract for specialist internal audit services with Baker Tilly. This provides the facility to supplement in-house resource if required. However, no use was made of this contract in 2015/16 and it is not currently anticipated that the contract will be used in 2016/17.
- 7.5 The Internal Audit element of the 2015/16 plan requires 7,742 days (2015/16: 6,737 days). The increase in the number of days is due to the transfer of staff from Crossrail.

HSE and Technical

- 7.6 In total, 1,550 days (2015/16: 2,767 days) of the plan relate to the various HSE and technical audit functions within the business. This excludes the HSE and technical team within Internal Audit, whose resources are included in the figures in para 7.5 above.
- 7.7 This total includes 650 days in relation to Occupational Health, Safety and Environmental audits carried out by staff who have been retained in Crossrail, although their work continues to be overseen by Internal Audit's Senior Audit Manager Crossrail.
- 7.8 The total also includes an estimated 900 days (2015/16: 900 days) in respect of the work of the various auditors embedded within different areas of the business (see para 5.1).

Project Assurance

- 7.9 The project assurance element of the plan requires 3,500 days (2015/16: 1750 days), representing the work of approximately 16 heads (2015/16: 8 heads) within the Project Assurance team carrying out IAR reviews. This increase results from a review of resource requirements following the transfer of Project Assurance into Finance during 2015. This time will be supplemented by the work of external experts and internal peer reviewers engaged to provide technical support on IAR reviews, which is not included in the table above.
- 7.10 The table also does not include time spent on reviews by IIPAG members (510 days budgeted for 2016/17 (2015/16: 450 days)).

8 Delivery of the Plan

8.1 The Integrated Assurance Plan will be kept under review throughout the year. In

- view of the ongoing pace of change within TfL, it is likely that it will be revised over the course of the year to reflect changing business priorities, including management requests for audit and consultancy work that we typically receive.
- 8.2 The Director of Internal Audit will, with input from other assurance providers, provide a quarterly report to the TfL Audit and Assurance Committee, and an annual report at the end of the year, summarising the work completed against the Integrated Assurance Plan. This information, together with outputs from other assurance obtained or observed during the year, will be used to provide an overall opinion on the effectiveness of internal controls across TfL.
